

PL-1U PULLEY LOCK

Features

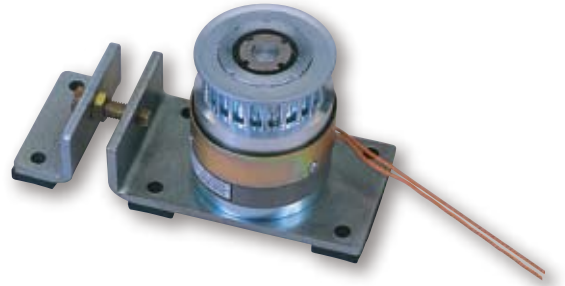

PL-1U is the electrical locking / unlocking device with the built-in electro magnetic lock within the idler pulley, which seizes a driving belt secured to door panel.

Simple installation by replacing PL-1U with an existing normal idler pulley

The installation dimensions are nearly same with those of normal idler pulleys.

Simple mechanism ensures locking / unlocking operations

Fail-safe lock condition enables it to unlock by turning off the power of automatic sliding door.
