NABCO Exhibited at HOSPEX Japan 2013

From October 23 to 25, 2013, Japan NABCO Group exhibited its entrance solutions at the HOSPEX Japan trade show held at Tokyo Big Sight. The event is one of the largest exhibitions in Japan targeting hospitals and medical facility providers. NABCO presented potential solutions for the improvement of entrance conditions in hospitals.

The theme of NABCO booth was “Offering Solutions to hospitals!”

NABCO proposed the Intelligent eco Door System as a solution for hospitals that are experiencing cold air draft problem at the reception space near the entrance, because of automatic doors opening unnecessarily every time a person passes by. Also exhibited was the Slide Glide which was designed to offer two features, one of a regular sliding door, and one to allow a full corridor open passage, for the transport of wide beds, for example. The Slide Glide was jointly developed with a design house engaging in hospital designs.

These products were highly commended by many visitors from field of medical and architectural design.

■ Intelligent eco Door System

By reading people's move, the system opens only when the pedestrian walks through the door. This significantly reduces the unnecessary door opening and allows hospitals to maintain comfortable air-conditions in the waiting room area.

■ Slide Glide

A two-way door that provides easy access in all kinds of situations. Normally operating as a conventional sliding door, the Slide Glide allows easy passage to beds and large objects.

For normal use

Fully opened
